UTAH SYSTEM OF HIGHER EDUCATION

Utah System of Higher Education
Electrical Residential
FY2026 / 12 Credits (360 Clock-Hours)

Foundational Courses

TEEL 1110 Electrician Apprentice IA — 3 Credits / 90 Clock-Hours

The Electrician Apprentice IA course establishes a solid foundation in electrical fundamentals and the study of basic electrical theory. This course addresses math applications as they relate to the electrical field. In this course, students will use the National Electrical Code (NEC) to apply code requirements to electrical systems. Students will learn and practice in the basics of conduit bending. Students will be introduced to electrical and jobsite hazards and workplace safety.

Objectives:
- Demonstrate a proficiency in general math skills with an emphasis on how they relate to the electrical field.
- Identify electrical and jobsite hazards.
- Explain workplace safety.
- Apply mathematical principles to conduit bending.
- Demonstrate a practical application of conduit bending.
- Explain the fundamentals of electrical theory.
- Explain the fundamentals of electrical circuitry.
- Demonstrate the application of the National Electrical Code (NEC) Articles 090-240.
- Demonstrate how to navigate the National Electrical Code (NEC) Articles 090-240.

TEEL 1120 Electrician Apprentice IB — 3 Credits / 90 Clock-Hours

The Electrician Apprentice IB course continues the study of electrical theory and its application within the electrical field. In this course, students will learn how devices and electrical systems work. Students will also explore lock out tag out, learn what makes a qualified person, and become more familiar with the National Electrical Code (NEC).

Objectives:
- Apply the fundamentals of electrical theory.
- Apply the fundamentals of electrical circuitry.
- Explain the definition of a qualified person.
- Explain responsibilities and risks of qualified persons.
- Demonstrate principles and procedures of lock out tag out.
- Demonstrate the application of the National Electrical Code (NEC) Articles 300-450.
- Demonstrate how to navigate the National Electrical Code (NEC) Articles 300-450.

TEEL 1210 Electrician Apprentice IIA — 3 Credits / 90 Clock-Hours

The Electrician Apprentice IIA course discusses single-phase and three-phase alternating current (AC) power systems, inductance, capacitance, reactance, power factor, and power correction. In this course, students will begin a more comprehensive analysis of National Electrical Code (NEC) requirements and calculations. They will explore the NEC requirements for wiring methods and installations of electrical systems as well as electrical safety in the use of energized equipment.

Objectives:
- Show proficiency in calculating properties of an AC circuit.
- Demonstrate proper use of hand tools and electrical equipment in practice live applications.
- Demonstrate proficiency in applying and calculating the sizing of Branch circuits, feeders, services, and load calculations.

TEEL 1220 Electrician Apprentice IIB **3 Credits / 90 Clock-Hours**

The Electrician Apprentice IIB course continues the comprehensive analysis of the National Electrical Code (NEC). In this course, students will evaluate the functions, uses, and calculations for direct current (DC) and alternating current (AC) motors, transformers, and other equipment. They will be instructed in electrical safety regarding Personal Protective Equipment (PPE) clothing requirements.

Objectives:
- Identify the types and voltages of transformers.
- Calculate values related to transformers.
- Apply the NEC with emphasis in codes regarding motors, transformers, and other electrical equipment.
- Identify types, categories, and ratings of PPE clothing.
- Show applications of types, categories, ratings of Personal Protective Equipment (PPE).
